

## About Sincera

Sincera is data integration and management from the file through the cloud. Sincera's solutions accelerate business automation and improve operational efficiency by leveraging our industry knowhow, global software and data engineering capabilities and our Data Management Platform – 1Data. 1Data provides a platform-driven approach on-prem or in the cloud to automate many data management challenges. These include data migration, data cleansing, data reconciliation, data synchronization and data transformation.

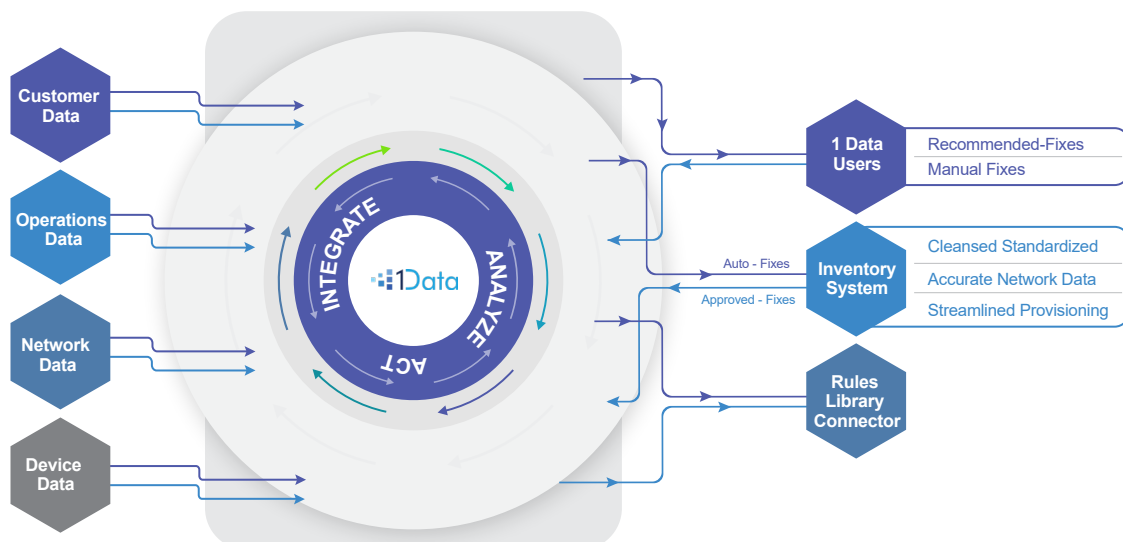

As experts in the Telecom and OSS space, Sincera has implemented and integrated numerous OSS solutions at carriers worldwide, since our formation in 2003, delivering measurable benefits to our customers and creating data management expertise at scale. We leverage our experience and deep domain knowledge of network, software and data models to deliver tools and solutions at the scale required by Network Operators.

**Today, Sincera operates in 3 core areas that are anchored by 1Data, our Data Management Platform:**

## Product

Sincera's Data Management Platform, 1Data, helps accelerates time-to-value and reduce risk for our customers by delivering automated, reusable solutions. 1Data is a low-code/no-code platform that allows the user to Integrate, Analyze and Act on their data with data driven rules and the automation of data workflows. In the Telecom Industry, 1Data can integrate with most systems and data sources to meet the needs of complex use cases.

## Consulting

## Software Engineering

Sincera has both onshore and offshore teams to help you overcome any software engineering challenge. Whether you need to Build Applications, Integrate Systems or Migrate and Modernize your Applications we understand that such initiatives are imperative for businesses to compete, drive revenue and reduce costs. Sincera Software Engineering services can help you by leveraging modern software technologies, code development and delivery practices.

## Why Sincera

What's unique about Sincera is that we help organizations make sense of the various data by using an agnostic approach and combining our extensible data management technology with our Industry and technology experts. This allows us our customers to develop solutions that use our extensive rules engines to apply business logic and then take action on data in automated ways.
